Gol Iplik Seremet Tekstil: Top quality & high flexibility in technical yarn production

"In Gol Iplik we have always selected suppliers that could constantly ensure top quality standards"

Mr. Erdogan Seremet

Mr. Erdogan Seremet,
Owner and president
of Gol Iplik Seremet Tekstil

The company

Gol Iplik Seremet Tekstil is a Turkish textile company located in Inegol (Bursa) that started its activities in the technical textile industry back in 1987 with a small spinning installation. Thanks to the great vision of the Seremet family the company has thrived, and Gol Iplik today represents an established global brand with a wide product range.

Production is carried out in Gol Iplik's three facilities that together cover an area of 71,000 m².

The company is specialized on the production of blended yarn from Ne6 to Ne60; the blends comprise any natural, regenerated and/or man-made fiber (e.g. viscose, linen, dralon, polyester, trevira, carded and combed cotton, wool, silk, angora and nylon).

Quality & flexibility

Gol Iplik's mission has always been to achieve customer delight and, in order to do this, the company has always given great importance to quality and flexibility.

"Gol Iplik's success has been underpinned by the great quality of our yarns and the wide product range. Our clients require high quality yarns in order for the fabric to have the desired features - beauty, durability, uniformity - and ask for a wide range of yarns because the technical textile industry is very dynamic:

they need a partner that can provide the right yarn for any application"

Mr. Erdogan Seremet, owner and president of Gol Iplik Seremet Tekstil, states.

In order to reach top quality and high flexibility, Gol Iplik

analyzes every detail of the yarn production process and rely on some of the world's best fiber producers for the supply of its raw material: Kelheim Fibers, Aksa, Lenzing, Birl and Trevira; and for its technological asset, ever since its conception, Gol Iplik has relied on Marzoli.

"In Gol Iplik we have always selected suppliers that could constantly ensure top quality standards"

Mr. Erdogan Seremet states.

Marzoli technological asset: a relationship of over 30 years

*"Our spinning plants
constantly deliver
outstanding quality
and are very flexible
as we can easily
change from one
production lot
to another"*

Assistant general manager

Mr. Ali Galip Bayraktar,
Assistant general manager

In order to excel on product quality, and achieve the highest standards in flexibility, Gol Iplik has always relied on Marzoli for its spinning technology.

The first project between Marzoli and Gol Iplik dates back to 1988 when Marzoli provided Gol Iplik with two spinning frames.

During ITMA 2011 Mr. Erdogan Seremet was awarded for being the first client in Turkey to install more than 100,000 spindles all from Marzoli.

"The great cooperation between our two companies has definitely contributed to the success of the Gol Iplik brand worldwide. Our spinning plants constantly deliver outstanding quality and are very flexible as we can easily change from one production lot to another".

Assistant General Manager of Gol Iplik Seremet Tekstil, states.

Marzoli C701: higher quality & productivity

"Marzoli C701 gives us the advantage of offering to our customers products of the highest quality standards and to reach great productivity levels"

Mr. Erdogan Seremet

After the outstanding results in quality and productivity of the first 5 Marzoli C701 installed in 2017, Gol Iplik Seremet, between 2018 and 2019, decided to install other 17 C701.

Thanks to their geometry, carding surface of 3.74 sqm, number of flats and sturdy design, these cards have been capable of achieving outstanding performances in the parallelization, selection of the fibres and productivity. Compared to the previous model C601, Marzoli C701 yields a production increase

of 30-50%, which, together with high efficiency motors and drives substantially improves the KPI kW/kg.

"Marzoli C701, confirms the great commitment of Marzoli to research and development. It gives us the advantage of offering to our customers products of the highest quality standards and to reach great productivity levels".

Mr. Erdogan Seremet, owner and president of Gol Iplik Seremet Tekstil, states.

Marzoli MTR for a fully automated spinning unit

Following the successful experience with Marzoli machines, Gol Iplik Seremet decided to install four Marzoli bobbin transport systems MTR to further boost automation on its spinning units.

The bobbins are carried by 4 closed-circuit overhead chains along the aisles between the 24 spinning frames installed in the plant. The MTR has been highly appreciated by Gol Iplik for its fully- customizable design, its reliability and especially for the possibility to integrate Marzoli bobbin stripper, the IBC, on the exchanger. The IBC allows to reduce the number of stops of the transport chain and to boost the transport overall efficiency when compared to competing solutions.

"We are very satisfied with Marzoli MTR circuits. Their installation is a further step that we have taken towards automation and integration between the machines"

Mr. Erdogan Seremet states.

"We are very satisfied with Marzoli MTR circuits. Their installation is a further step that we have taken towards automation and integration between the machines"

Mr. Erdogan Seremet

High yarn quality for beautiful & durable fabrics

"Marzoli machines have always yielded the highest performances on quality. The tests in our laboratory showcase great strength and elongation values of the yarn and minimum IPIs"

"Gol Iplik has always invested in order to reach the highest quality results: all our laboratories are equipped with the latest technologies that our quality teams use to undertake tests at every stage of the production process: from the raw material to the end product" asserts.

It is thanks to the above mentioned tests that Gol Iplik has been able to better appreciate the quality of Marzoli machines.

"Marzoli machines have always yielded the highest performances on quality. The tests in our laboratory showcase great strength and elongation values of the yarn and minimum IPIs" states.

The accurate selection of the raw material, coupled with Marzoli's technological excellence, enable Gol Iplik to consistently reach highly demanding quality standards with a trouble-free spinning experience.

Marzoli Service: prompt, reliable & competent

"Every time we have a new project, Marzoli helps us designing the plant according to the specific features.

The competence of Marzoli Product Managers keeps the performance of the machines at their best over time"

Assistant general manager

"Beside state-of-the-art technology, that even after many years since its start-up still delivers great performances, another key aspect that has contributed to the development of the long and successful relationship between Gol Iplik and Marzoli has been the great level of service that Marzoli has always offered us"

Assistant general manager states.

Marzoli assists all its clients from the design of the spinning plant, through its installation and start, up to its constant maintenance. This gives a great added value to any spinner because it gives him an advanced technical asset that will consistently deliver superior performances on quality, productivity, flexibility and efficiency.

"Every time we have a new project, Marzoli helps us designing the plant according to the specific features.

The competence of Marzoli Product Managers keep the performance of the machines at their best over time"

Assistant general manager explains.

"The excellent Marzoli's technology, joined to its competent and reliable after-sales service, have been able to successfully serve Gol Iplik Seremet Tekstil for more than 30 years and have actively contributed to our growth and success"

Mr. Erdogan Seremet states.
